

## **Part VI: Summary of the risk management plan**

This is a summary of the risk management plan (RMP) for OLONET (olopatadine as hydrochloride). The RMP details important risks of OLONET, how these risks can be minimised, and how more information will be obtained about OLONET's risks and uncertainties (missing information).

OLONET 's summary of product characteristics (SmPC) and its package leaflet give essential information to healthcare professionals and patients on how OLONET should be used.

### **I. The medicine and what it is used for**

OLONET 1 MG/ML eye drops, solution is authorised for Treatment of ocular signs and symptoms of seasonal allergic conjunctivitis. (see SmPc for the full indication).

It contains olopatadine hydrochloride as the active substance and it is given by ocular use.

### **II. Risks associated with the medicine and activities to minimise or further characterise the risks**

Important risks of OLONET together with measures to minimise such risks and the proposed studies for learning more about OLONET's risks, are outlined below.

Measures to minimise the risks identified for medicinal products can be:

- Specific information, such as warnings, precautions, and advice on correct use, in the package leaflet and SmPC addressed to patients and healthcare professionals;
- Important advice on the medicine's packaging;
- The authorised pack size — the amount of medicine in a pack is chosen so to ensure that the medicine is used correctly;
- The medicine's legal status — the way a medicine is supplied to the patient (e.g. with or without prescription) can help to minimise its risks.

Together, these measures constitute *routine risk minimisation* measures.

If important information that may affect the safe use of OLONET is not yet available, it is listed under 'missing information' below.

### **II. A List of important risks and missing information**

Important risks of OLONET are risks that need special risk management activities to further investigate or minimise the risk, so that the medicinal product can be safely taken. Important risks can be regarded as identified or potential. Identified risks are concerns for which there is sufficient proof of a link with the use of OLONET. Potential risks are concerns for which an association with the use of this medicine is possible based on available data, but this association has not been established yet and needs further evaluation. Missing information refers to information on the safety of the medicinal product that is currently missing and needs to be collected (e.g. on the long-term use of the medicine);

List of important risks and missing information	
Important identified risks	- NONE
Important potential risks	- NONE
Missing information	- NONE

### ***II.B Summary of important risks***

The safety information in the proposed Product Information is aligned to the reference medicinal product.

### ***II.C Post-authorisation development plan***

#### **II.C.1 Studies which are conditions of the marketing authorisation**

There are no studies which are conditions of the marketing authorisation or specific obligation for OLONET.

#### **II.C.2 Other studies in post-authorisation development plan**

There are no studies required for OLONET.
